1 · Base assumptions & method

Goals (athlete-confirmed)

- **GREATMAN Wolsztyn 70.3** — Sat 19 Sep 2026 — **B-race / tune-up**. Target **4:20**, swim 34-36'.
- **Garmin Triathlon Tour Syców 1/2 IM** — Sun 11 Jul 2027 — **B-race / tune-up**. Target **3:59**, swim 33'.
- **IRONMAN Calella-Barcelona** — Sun 03 Oct 2027 — **A-race**. Target **8:50**, swim ~1:08.
- Volume ceiling: **12 h/wk** to first race, **17 h/wk** after.

Equipment

Disc/aero TT setup remains the bike-speed lever on Barcelona's fast course. Shimano Di2 failed at Malbork — fix or replace before Wolsztyn; race only on a shifting bike. Recalibrate PM vs Kickr after any workshop visit.

Data sources

- Activities, power, pace, load: **intervals.icu** (Garmin-synced), 892 sessions 2025-01-01→2026-09-07.
- CTL/ATL: intervals.icu wellness where present, else Banister (τ_{42}/τ_7) on local TSS.
- Recovery (HRV/RHR/sleep): wearable wellness.

Models & guardrails

- Load: Banister impulse-response (CTL/ATL/TSB).
- Race detection: triathlons reconstructed from transition activities; classified to nearest IM fraction.
- The plan is gated by a **deterministic validator** (ramp caps, recovery cadence, ACWR, intensity distribution, taper window, race-day TSB). See §8.

Decision-support, not medical or coaching advice. Physiology values are estimates with provenance tags. Validate paces/powers in training and adjust to in-session readiness.

2 · Athlete profile

Physiology (estimated)

METRIC	VALUE	SOURCE
Weight	73.0 kg	intervals.icu wellness
FTP (bike)	280.0 W (3.84 W/kg)	intervals settings
VO2max (bike)	59 ml/kg/min	Firstbeat estimate
Run threshold	3:30/km	intervals.icu sport settings
VO2max (run)	67 ml/kg/min	Firstbeat estimate
LTHR	165.0 bpm	intervals settings
Max HR	182.0 bpm	intervals settings
Swim CSS	1:45–1:48/100m	season spec (pool threshold)
Bike decoupling	3.52 %	Pw:HR

Health / readiness

METRIC	NOW	BASELINE	TREND
HRV rMSSD	84.0	93.8 (60d)	down
Resting HR	39.0	37.2 (60d)	flat
Sleep	7.03 h	—	—

Training load by discipline

SPORT	CTL	ATL	TSB	TREND
combined	69.4	58.1	11.3	down
swim	8.0	4.8	2.7	down
bike	30.3	20.7	7.2	down
run	27.4	23.4	10.6	down

The headline limiter: swim. Swim CTL 8.0 vs bike 30.3 / run 27.4. Only ~44 h swimming logged in 2026. The swim costs little time on the clock but, untrained, it taxes the whole day. The plan holds **swim ≥ 3x/week** throughout — the single highest-leverage change.

Why the targets are plausible (YoY trajectory)

- Half: 4:24 (Syców 2026) -> ~4:20 Wolsztyn closer -> 3:59 Syców 2027 (stretch).
- Full: 10:36 (2025) -> ~9:10 fitness (2026, unrun) -> 8:50 Barcelona 2027.

2026-08-30	11.5	401	10
2026-09-06	6.3	266	12
2026-09-13	1.0	73	1

Demonstrated capacity (last 16 wk peak above) frames the plan's peak weeks as an extension of proven load, not a step into the unknown.

5 · Target race splits

GREATMAN Wolsztyn 70.3 → 4:20

LEG	TARGET	DETAIL
Swim 1.9 km	35:00	1:50/100m OW; don't freeze the arms
T1	2:00	
Bike 90 km	2:16:00	~39.7 km/h @ ~250 W (race PM)
T2	1:30	
Run 21.1 km	1:25:00	~4:02/km; first 5 km slower
TOTAL	4:20	

vs Syców 2026 (4:24:05). Same fitness, short turnaround after Malbork DNF and a cold. Race controlled; not a breakthrough attempt.

Garmin Triathlon Tour Syców 1/2 IM → 3:59

LEG	TARGET	DETAIL
Swim 1.9 km	33:00	1:44-1:46/100m OW; CSS is 1:45-1:48
T1	1:20	sub-4 lives in T as well
Bike 90 km	2:08:00	~42.2 km/h @ 255-260 W NP; hard cap 260 W
T2	0:50	
Run 21.1 km	1:16:00	3:36/km; first 3 km ~3:42
TOTAL	3:59	

vs Syców 2026 (4:24:05). ~25 min has to come from swim (~3'), T (~1'), bike (~8') and run (~10') — Syców is a fast course, but the run only holds if the bike stays ≤260 W NP. 3:59 = 33' / 2:08 @ 255-260 W NP / 1:16. Bankable line is 4:05 if the bike is slower; do not chase 3:59 by riding 270 W.

IRONMAN Calella-Barcelona → 8:50

LEG	TARGET	DETAIL
Swim 3.8 km	1:08:00	1:47/100m, wetsuit sea; CSS is already here
T1	3:00	
Bike 180 km	4:38:00	~38.8 km/h @ ~210 W NP (fast course + aero)
T2	2:00	
Run 42.2 km	2:59:00	4:15/km; first 10 km 4:20-4:25
TOTAL	8:50	

Malbork 2026 DNF (Di2) after 1:22 swim in 17.2 C. Fitness was ~9:10 (70'/4:50/3:05). Barcelona is faster/warmer; 8:50 is a year of swim-OW, +10-15 W IM power, and holding a 4:15/km marathon off the bike. 8:50 = 1:08 swim + 4:38 bike + 2:59 run + ~5 min T. Fast course.

- (1) Mechanical reliability — Di2 DNF. (2) Cold-water swim — 1:22 at Malbork was environment not CSS; train OW and warm-up better. (3) Run off a faster bike — 8:50 dies if 4:38 is ridden at 230 W. (4) Don't smash Wolsztyn sick. (5) Syców sub-4 — the 70.3 bike cap is 260 W NP; a 270 W 2:05 with a 1:22 shuffle is a 4:10 and a worse Barcelona.

S/B/R = swim/bike/run sessions. Recovery weeks drop load $\geq 40\%$ (derived, not just labelled).

Session detail

Week 1 2026-09-07 · build

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Mon 07.09	Run threshold (completed)	MODERATE	58:00	72	14.6 km already done Mon AM.
Mon 07.09	Bike anaerobic (Kickr)	HARD	1:20:00	117	80' total. Main set 2x17x10s @ 450 W (full recoveries, rest of ride Z2). Neuromuscular hole from the IM block — not 10 min at 450 W.
Tue 08.09	Swim aerobic endurance 4300m	EASY	1:14:00	40	Same as Fri 21 Aug peak-brick week: 4300m pool, ~1:43/100 moving. Continuous + pull/paddles; keep it aerobic, not a CSS test.
Wed 09.09	Run easy	EASY	40:00	37	Z2 conversational. Legs after Mon double.
Thu 10.09	Swim aerobic	EASY	45:00	24	2000-2500m. Frequency, not another 4300m.
Thu 10.09	Easy spin (race bike if it shifts)	EASY	50:00	38	Z2. Confirm a working race bike this week. Kickr if Di2 still dead.
Fri 11.09	Swim easy	EASY	40:00	21	2000m feel. Third swim. Legs stay fresh for Saturday brick.
Sat 12.09	70.3 brick ride	MODERATE	1:30:00	105	TT bike in aero (must shift). 2x20' @ ~250 W, rest Z2. Fuel 70-80g/h. Last quality brick before Wolsztyn.
Sat 12.09	Brick run off bike BRICK	MODERATE	30:00	38	Off the bike @ ~4:00-4:05/km (Wolsztyn run pace). First 10' slower.
Sun 13.09	Off / walk	EASY	20:00	7	Optional. Then mini-taper week.

Week 2 2026-09-14 · taper

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Mon 14.09	Swim aerobic	EASY	40:00	21	Feel for the water. 6-8x50 build.
Tue 15.09	Bike race-power touches	MODERATE	55:00	64	3x8' @ ~250 W on the RACE bike (must shift). Zero-offset PM.
Wed 16.09	Swim race-pace	MODERATE	30:00	24	8x100 @ CSS, long rest.
Wed 16.09	Run easy + strides	EASY	35:00	32	Z2 + 6x20s.
Thu 17.09	Easy spin	EASY	35:00	27	Legs open.
Fri 18.09	Shakeout	EASY	15:00	14	10-15' + 4 strides. Optional.
Sat 19.09	RACE: GREATMAN Wolsztyn 70.3	RACE	4:20:00	290	Target 4:20. Swim 35' / bike 2:16 @ ~250 W / run 1:25. Controlled — not a breakthrough.
Sun 20.09	Walk	EASY	20:00	7	Flush.

Week 3 2026-09-21 · transition

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Tue 22.09	Swim easy	EASY	35:00	19	Frequency only.
Wed 23.09	Easy spin	EASY	50:00	38	Z2.
Thu 24.09	Run easy	EASY	40:00	37	Z2.
Fri 25.09	Swim aerobic	EASY	40:00	21	
Sat 26.09	Easy ride	EASY	1:00:00	46	Scenic Z2.
Sun 27.09	Run easy	EASY	35:00	32	

Week 4 2026-09-28 · base

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Mon 28.09	Swim technique + aerobic	EASY	30:14	16	Drills + 8-12x100 aerobic @ CSS+5s. Limiter focus: form under low fatigue.
Mon 28.09	Strength (lower + core)	EASY	27:13	10	Heavy-ish posterior chain + core; injury prevention, not fatigue.
Tue 29.09	Bike key set	MODERATE	29:02	34	VO2/threshold 5x4' @ 110-118% FTP or 3x12' @ 95-100% FTP
Wed 30.09	Swim threshold	MODERATE	33:16	27	Main set ~2000m @ CSS (target 1:45-1:48/100m). Build swim-specific fitness.
Wed 30.09	Run easy + strides	EASY	27:13	25	Z2 aerobic + 6x20s strides. Off-feet recovery from bike key day.
Thu 01.10	Bike tempo/sweet-spot	MODERATE	32:39	38	2-3x20' @ 88-94% FTP (sweet spot). Aerobic-power durability.
Fri 02.10	Swim aerobic endurance	EASY	30:14	16	Continuous + pull/paddles; 2500-3000m steady. Third swim = the needle-mover.
Fri 02.10	Mobility / core	EASY	18:09	7	Optional; keep easy.
Sat 03.10	Long ride (Z2) + brick	EASY	2:30:00	115	On the TT bike in aero. Hold race position; fuel 70-90g carbs/h. New disc/aero setup -> validate position + power-speed.
Sat 03.10	Brick run off bike BRICK	EASY	30:00	28	First 10' @ 1M/half race pace off the bike, then Z2.
Sun 04.10	Long run (Z2)	EASY	1:12:00	66	Aerobic long run; last 15-20' @ race effort when fresh enough.

Week 5 2026-10-05 · base

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Mon 05.10	Swim technique + aerobic	EASY	35:01	19	Drills + 8-12x100 aerobic @ CSS+5s. Limiter focus: form under low fatigue.
Mon 05.10	Strength (lower + core)	EASY	31:31	12	Heavy-ish posterior chain + core; injury prevention, not fatigue.
Tue 06.10	Bike key set	MODERATE	33:37	39	VO2/threshold 5x4' @ 110-118% FTP or 3x12' @ 95-100% FTP
Wed 07.10	Swim threshold	MODERATE	38:31	31	Main set ~2000m @ CSS (target 1:45-1:48/100m). Build swim-specific fitness.
Wed 07.10	Run easy + strides	EASY	31:31	29	Z2 aerobic + 6x20s strides. Off-feet recovery from bike key day.
Thu 08.10	Bike tempo/sweet-spot	MODERATE	37:49	44	2-3x20' @ 88-94% FTP (sweet spot). Aerobic-power durability.
Fri 09.10	Swim aerobic endurance	EASY	35:01	19	Continuous + pull/paddles; 2500-3000m steady. Third swim = the needle-mover.
Fri 09.10	Mobility / core	EASY	21:00	8	Optional; keep easy.
Sat 10.10	Long ride (Z2) + brick	EASY	2:30:00	115	On the TT bike in aero. Hold race position; fuel 70-90g carbs/h. New disc/aero setup -> validate position + power-speed.
Sat 10.10	Brick run off bike BRICK	EASY	30:00	28	First 10' @ 1M/half race pace off the bike, then Z2.
Sun 11.10	Long run (Z2)	EASY	1:18:00	72	Aerobic long run; last 15-20' @ race effort when fresh enough.

Week 6 2026-10-12 · base

DAY	SESSION	INT.	DUR	TSS	PRESCRIPTION
Mon 12.10	Swim technique + aerobic	EASY	38:12	20	Drills + 8-12x100 aerobic @ CSS+5s. Limiter focus: form under low fatigue.
Mon 12.10	Strength (lower + core)	EASY	34:23	13	Heavy-ish posterior chain + core; injury prevention, not fatigue.
Tue 13.10	Bike key set	MODERATE	36:40	43	VO2/threshold 5x4' @ 110-118% FTP or 3x12' @ 95-100% FTP
Wed 14.10	Swim threshold	MODERATE	42:01	34	Main set ~2000m @ CSS (target 1:45-1:48/100m). Build swim-specific fitness.
Wed 14.10	Run easy + strides	EASY	34:23	32	Z2 aerobic + 6x20s strides. Off-feet recovery from bike key day.
Thu 15.10	Bike tempo/sweet-spot	MODERATE	41:15	48	2-3x20' @ 88-94% FTP (sweet spot). Aerobic-power durability.

Sun 03.10	RACE: IRONMAN Calella-Barcelona	RACE	8:50:00	480	Target 8:50. Swim 1:08 / bike 4:38 @ ~210 W NP / run 2:59 @ 4:15/km.

7 · Why this calendar

Close 2026 with GREATMAN Wolsztyn 70.3 (B-race, 12 days post-Malbork DNF). Malbork was a mechanical DNF at ~45 km, not a finished IM — no transition unload. Week 1 resumes quality (anaerobic bike hole + swim volume) then eases into a mini-taper. Residual IM fitness is enough for a controlled ~4:20 70.3. Then winter base, spring 70.3-specific build into Garmin Syców (B-peak, stretch 3:59), one-week reset, then IM-specific 4h+2h bricks and a 2-week taper into Barcelona (A-goal 8:50). Syców is a real race, not a workout — mini-taper, race-power openers — but the bike is capped at ~260 W NP so the run can hold ~3:36/km and Barcelona's 2:59 is not spent in July. Swim limiter is cold/OW skill not CSS; hold ≥ 3 swims/week.

Progressive overload, bounded

Load grows peak-to-peak at $\leq 10\%$ TSS/week between *load* weeks (recovery valleys excluded); projected CTL ramp stays under the 7/week cap. Starting CTL ~69.4. A recovery valley (W7) and the first-race deload keep ACWR under 1.5.

Swim, the limiter

Three swims every week regardless of phase. Frequency > duration for a thin swim base: it builds feel-for-water and durability without stealing the bike/run hours that move the clock more.

Bike: convert the watts

Long rides are on the TT bike in race position so the new disc/aero setup becomes a real race split, not a dyno number. Race-power long rides rehearse IM pacing and fuelling (70-90 g carb/h).

Run: durability over speed

The IM result lives or dies on the run. Volume is aerobic (Z2) with race-effort finishes and brick runs off long rides so the legs learn IM marathon pace under fatigue — never a full-distance run.

Taper & race-day form

Two-week taper holds intensity but cuts volume so fatigue (ATL) sheds faster than fitness (CTL). The validator projects race-day TSB in the +10..+25 band that maximizes A-race performance without going stale.

8 · Guardrail report

Checked by the deterministic validator (aithlete validate): **PASS** (0 errors).

CHECK	RESULT
Weekly TSS ramp (peak-to-peak $\leq 10\%$)	pass
CTL ramp $\leq 7/\text{wk}$	pass
Recovery cadence (≤ 3 load wks)	pass
Projected ACWR ≤ 1.5	pass
Taper window	pass
Race-day TSB in A-band	pass
Swim/bike/run frequency mins	pass
Brick in every build week	pass

Advisory warnings (non-blocking): (a) the post-first-race weekly-hours step into the bigger block (TSS ramp stays within cap); (b) race-specific and taper weeks dip below the 70% easy-time floor because short quality work is a larger fraction of low volume. Total stress stays easy-dominated.

9 · Execute

Publish planned workouts to intervals.icu (syncs to Garmin):

```
uv run aithlete validate data/plans/goal-2027-barcelona.json
uv run aithlete push      data/plans/goal-2027-barcelona.json  # gated by the validator
```

Re-run aithlete profile after the first race to refresh CTL/FTP/PRs, then adjust-plan if readiness moves the targets.
